

# Track-based solutions for IMR translation layer

Mohammad Hossein Hajkazemi, Ajay Kulkarni, Peter Desnoyers,  
Timothy Feldman

Northeastern  
University

# Interlaced Magnetic Recording (IMR)

- IMR technology
  - Offers higher capacity
  - Enabled by using HAMR
  - Half of the tracks overlap
    - Limitations on in-place updates

Conventional track layout

Shingled track layout

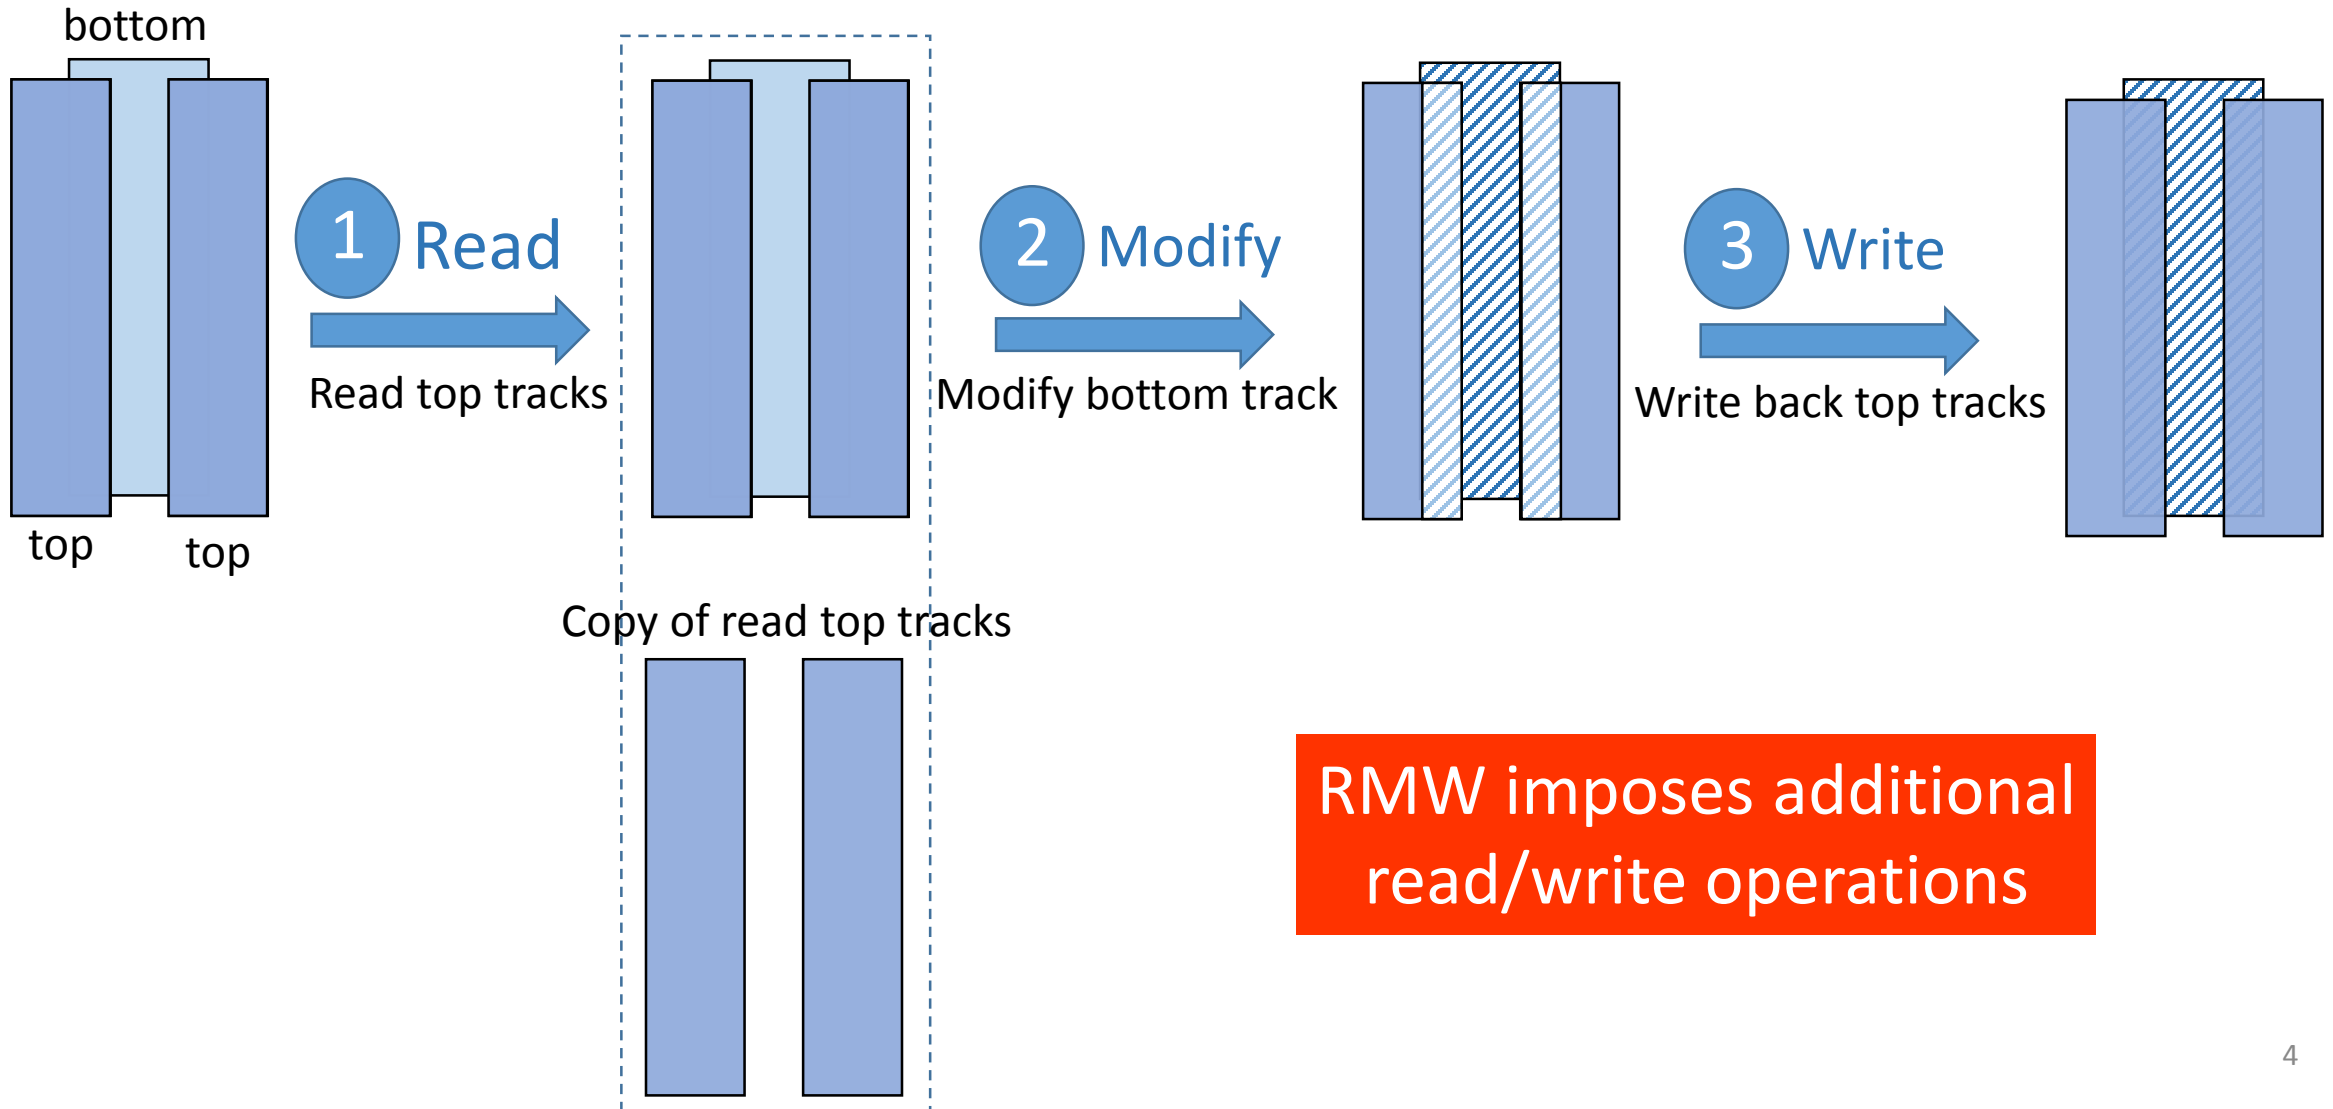

Interlaced track layout

# IMR Limitation

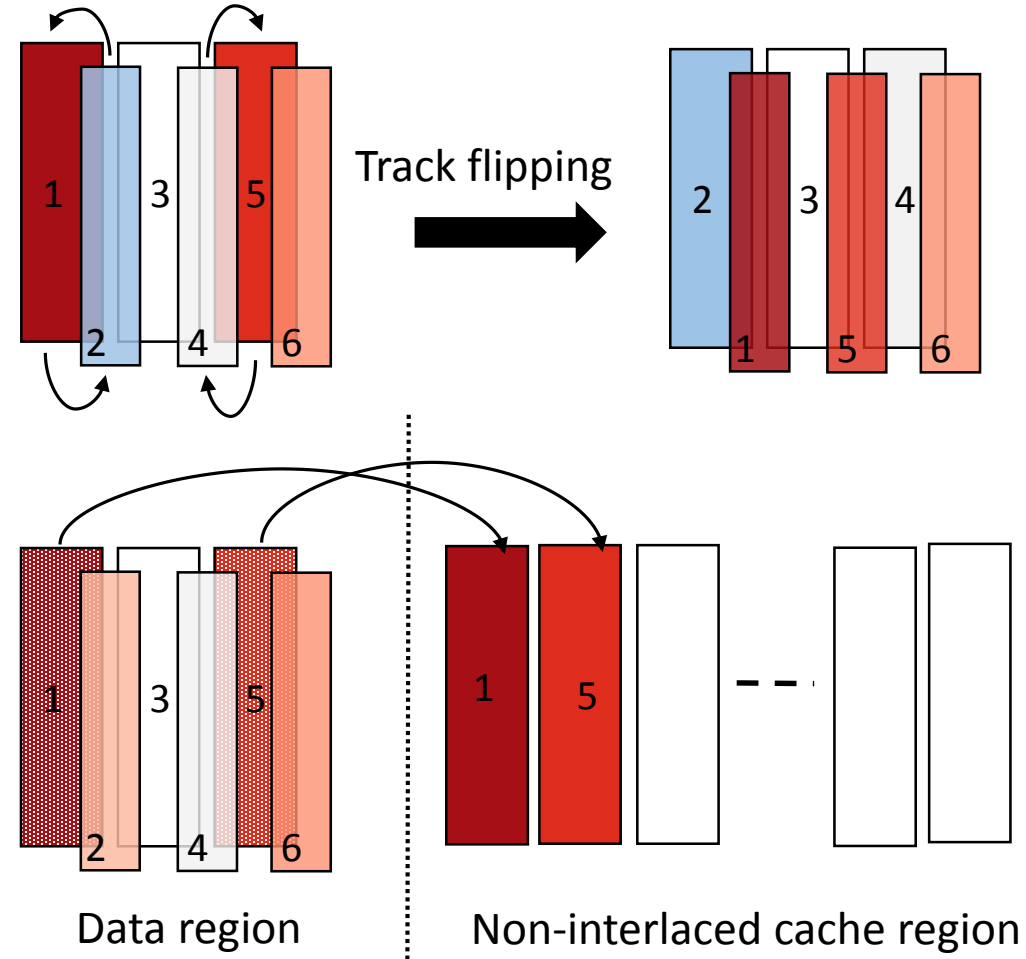

# IMR Read-modify-write: the simple solution

RMW imposes additional read/write operations

# Track-based solutions

- Track Flipping
  - Hot bottom tracks are swapped with neighboring cold tracks
- Track caching
  - Hot tracks are cached in a non-interlaced area
- Dynamic track mapping
  - Hot bottom tracks are swapped with cold top ones within a small number of tracks called zone

# Track-based solutions performance

ATC 2019- Track 1: **Solid-State & Hard Disk Drives**

Time: 10:15, Friday July 12th
