MARKETS SPIRAL AS GLOBE SHUDDERS OVER VIRUS

Fears of Recession as Health Crisis Weighs on Investors and Oil Prices

This article is by **Matt Phillips**, Peter Eavis and **David Enrich**.

The fast-spreading coronavirus and a plunge in financial markets on Monday, a self-perpetuating downward cycle that could inflict serious harm on the global economy.

What started last month as unease about a potential economic slowdown in China has evolved into a borderline panic, with the S&P 500 crashing nearly 8 percent on Monday. The mayhem is threatening to roll the underlying global financial system and the abilities of companies large and small to survive — a downward economic monsoon — a downward spiral that is fed and intensified by these destructive forces.

The odds of such a storm grew after an unexpected fight between Russia and Saudi Arabia. After failing to reach an agreement about how much oil to produce and sell on international markets, Saudi Arabia announced it would quickly ramp up production. Oil prices had been falling as investors fretted about a possible recession. On Monday, those prices plummeted more than 20 percent — the sharpest decline since the first Persian Gulf war.

Facing one of the worst crises since he was sworn in, President Trump — who has played down

the virus threat — said he would talk on Tuesday with Republican congressional leaders about a payroll tax cut and legislation to protect hourly wage earners who may have to miss work because of the virus. He did not provide any details.

The S&P 500 has tumbled 19 percent over the past few weeks, and Monday was its worst one-day decline in over a decade. The free fall has vaporized more than \$5 trillion in stock market wealth.

Less than 10 minutes after markets opened in the United States on Monday morning, the sell-off became so steep that automatic "circuit breakers" kicked in and halted trading. It was the first time that had happened since the current circuit breakers were set in 2013. The S&P's 76 percent drop came on the 11th anniversary of the start of the current bull market.
